

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

*Report from Santiago—Inspection of vessels—House and water-deposit inspection.*

Acting Assistant Surgeon Wilson reports, November 25:

Week ended November 21. Bills of health issued to 6 vessels bound for the United States. No quarantinable disease was reported.

There were inspected 3,511 houses. Mosquito larvæ were found in 9.

GREAT BRITAIN.

*Report from Liverpool—Further relative to appearance of plague on barge Wesley.*

Vice-Consul Sulis reports, November 17:

The theory that plague was brought to Liverpool in rags which were carried in the barge *Wesley* the day before the first case sickened (see Public Health Reports December 4, 1908, p. 1773) is not now accepted by the medical authorities, who up to the present time are unable to account for the appearance of the disease.

HAWAII.

*Report from Honolulu—Examination of rats for plague infection.*
